

YANNICK KUETE

Software Developer & Automation Engineer

Denver, CO 80014 | (720) 694-2513 | yankuete@gmail.com | github.com/ykuete | ykuete.github.io/YANNICK-KUETE-PORTFOLIO

Open to Full-Time Software Development Opportunities — Available Immediately

PROFESSIONAL SUMMARY

Results-driven Computer Science student (3.4 GPA, anticipated graduation May 2027) with hands-on experience across the software development lifecycle — design, testing, debugging, and technical documentation — spanning network security, database engineering, and DevOps automation. Recently completed coursework in Computer Security, Computer Networks, Algorithms, and Database Systems, building practical skills in firewall configuration, encryption, authentication, SQL injection remediation, and security monitoring, alongside relational database design (3NF normalization, ER modeling) and PostgreSQL/PHP development. Combines this with real-world DevOps tooling (Docker, Jenkins, Ansible), AWS-certified cloud knowledge, and strong programming fundamentals in C, C++, Python, and Bash. Currently deepening software engineering practice, UNIX administration, Android development, and applied NLP with Generative AI — with growing comfort using AI-enabled dev tools responsibly alongside human oversight.

CORE COMPETENCIES

Languages & Scripting: C · C++ · Python · Bash · JavaScript · SQL

Cybersecurity & Networking: Firewall Configuration · Encryption & Authentication · SQL Injection Remediation · Security Monitoring · TCP/UDP Socket Programming · Network Attack Analysis

Databases: PostgreSQL · Relational Database Design (3NF, ER Modeling) · PHP

Automation & DevOps: Docker · Jenkins · Ansible · AWS · Git · CI/CD Pipelines

Software Engineering Practice: SDLC Fundamentals · Technical Documentation · UNIX/Linux Administration · AI-Enabled Dev Tools

Certifications: AWS Certified Solutions Architect – Associate (2024) | CompTIA A+ (2024)

PROFESSIONAL EXPERIENCE

Customer Service Engineer | WWTS

2023 – Present

- Diagnosed and repaired HP, Dell, and Mac assets across large-scale enterprise environments, ensuring minimal downtime for end users.
- Wrote custom Bash and Python scripts to triage and resolve CrowdStrike-related IT outages, restoring critical system functionality and automating recurring remediation steps so technicians could resolve similar incidents in minutes rather than hours.
- Streamlined hardware-swap workflows by scripting asset-tracking updates, cutting manual data-entry time and reducing inventory errors.

Civil Engineer | FebDesign

2016 – 2021

- Designed and documented construction projects ensuring strict compliance with engineering standards and safety regulations, and coordinated cross-functional teams — building the project-management discipline that now informs structured, sprint-based development work.

PROJECT EXPERIENCE

Materials Selection Database | PostgreSQL, PHP, SQL

- Designed and implemented a normalized (3NF) relational database for a materials-selection application, including ER diagrams, schema architecture, and relational-algebra formalization of core queries.
- Built a PHP front end connected to a PostgreSQL backend, translating functional dependencies and entity relationships into a working, query-driven web application.

Network Socket Programming Labs | C

- Implemented TCP stream-socket and UDP datagram client/server systems in C, demonstrating reliable connection-oriented exchange and connectionless, packet-level communication between networked processes.

Modern Tetris Clone | C++, Raylib

- Developed a fully functional Tetris recreation applying Object-Oriented Programming principles and clean architecture patterns.
- Engineered collision detection, line-clearing, and adaptive-difficulty algorithms; integrated a Makefile-based build system for one-command compilation across platforms.

“Wheel of Hopes” Interactive Engineering Prototype | University of Colorado Denver

- Led end-to-end engineering lifecycle of a physical gaming device designed to facilitate social interaction, then executed a data-driven design pivot by conducting real-time user testing and translating feedback into revised technical requirements — mirroring agile iteration practices used in software delivery.

EDUCATION

University of Colorado Denver

Anticipated Graduation: May 2027

Bachelor of Arts, Computer Science | GPA: 3.4

Completed Coursework: Data Concept Systems, Algorithms, Computer Security, Introduction to Computer Networks

Current Coursework (Fall 2026): Software Engineering (CSCI 3310), UNIX Fundamentals (CSCI 001), Android App Development (CSCI 3310), NLP with Generative AI (CSCI 4230/5230)

Community College of Aurora — A.S., Computer Science (2022–2025) | UIT Bandjoun, Cameroon — Civil Engineering (2012–2016)
